

For Immediate Release

Analytic Systems Supports USMC, OEF in anti-IED program

Surrey, BC, Canada. January 9, 2008. The US Marine Corps through Tobyhanna Army Depot has chosen Analytic Systems to provide 100 rugged commercial Voltage Converters for use in a kit used in SUVs to support Operation Enduring Freedom. The model VTC605-12-24 is a standard commercial product originally designed for the rigorous commercial marine market. No added ruggedization was deemed necessary by the Army as the VTC605 was seen as a superior unit in its normal configuration. The VTC605 will be used to adapt anti-IED equipment to vehicles that have 12V systems.

Analytic Systems, of Surrey, B.C., Canada, manufactures a wide range of high performance Power Conversion products including MPPT Solar Charge Controllers, DC/DC voltage converters, AC and DC source battery chargers, AC/DC power supplies and DC/AC inverters for Military, Alternative Energy, Commercial Marine, and Industrial, applications, throughout North America and around the world.
