

For Immediate Release

ANALYTIC SYSTEMS AWARDED US ARMY SUBCONTRACT!

Delta, British Columbia (October 26, 2009) — Analytic Systems is proud to announce that it has again been awarded the subcontract to manufacture the power supply for the US Army's Modern Burner Unit (MBU) program through the Energy Solutions Division of Teleflex Canada. After an exhaustive evaluation of power supply manufacturers on both sides of the border, Teleflex selected Analytic Systems to continue the manufacture of the program. Two years of development and testing culminated in Analytic Systems initially being certified as the manufacturer and supplier of the MBU power supply in late 2002. Since then over 7000 units are now in theatre and have enjoyed a less than 0.01% return rate.

The latest order is an urgent requirement for 205 units, it will be part of an ongoing requirement through 2011.

Analytic Systems, of Delta, B.C., Canada, (www.analyticsystems.com) manufactures a wide range of high performance Power Conversion products including DC to DC voltage converters, AC and DC source Battery Chargers, MPPT Solar Charge Controllers, AC to DC power supplies and DC to AC inverters for Military, Alternative Energy, Marine, and Industrial applications throughout North America and around the world.
